**COMMENTS:**

\* not reportable last year

- (1) Salmonella by type: Typhmuriium(Gr B)-1, Enteriditis-2, Heidleburg-2, Oranienburg-1, Paratyphi-1, St. Paul-1, Brandenburg-1, unknown-3
- (2) AIDS cases total for 05-06 are cumulative as of 12/31/05. The individual town numbers reflect new cases in calendar year 2005, with cumulative cases in parentheses. HIV infection total cases for 05-06 are cumulative; individual towns are for 05-06 only, with the same format for AIDS reporting.
- (3) Child cases only, newly poisoned. Does not account for those being followed for elevations less than poisoning level (n=20)
- (4) 79 animals tested. 13 positive: 12 raccoons, 1 skunk.
- (5) Lyme disease is not laboratory-reportable. It is only physician-reportable.
- (6) Influenza by type: 7 type A and 1 type B (Increase in testing noted.)
- (7) 17 were non-lab confirmed reports. 14 of the 19 cases were vaccinated. .
- (8) These reports reflect blood culture only. The CDC standard for a case is by nasal culture, not blood culture. Therefore, these are not necessarily cases.
